Bar coding in the Blood Bank

for Ease, Speed + Accuracy

**Ann Mountain Wilson, TSO – MUHC
ICCBBA-GS1 International Meeting
June 20, 2008**

Bar coding in the blood bank

Bar coded
Blood
components

Non bar coded
Plasma
derivatives

Significant difference in:

- Efficiency
 - Time to enter & verify entry
- Risk of error
 - Reading, interpreting, data entry, data verification
- Costs associated
 - Low efficiency, error management & correction
- **Patient safety**
 - Aspect of data accuracy & traceability

McGill University Health Centre

■ Specialties include:

- Auto/Allo Bone marrow/stem cell transplant
- Solid organ transplant → IgHepB
- Hematology/oncology
- Cardiovascular surgery
- Obstetrics → RhIG
- Neurology / Neurosurgery → IVIg, Tisseel
- Apheresis → Albumin
- Specialized Pediatrics / Neonatology → Albumin
- Neonatal/pediatric cardiac surgery & ECMO
- Thalessemia & Sickle Cell Centre
- Hemophilia centre → Factors

Stable (Fractionated) Products

Entry activity per year

Activity	# entries	# vials	# vials/entry
Received	2417	48,637	20
Issued	17,154	50,698	3
Returns	2,847	5,830	2
Total activity	22,500	105,200	5

Product information entered:

■ Blood components

- Order #
- Invoice #
- Date of receipt
- Supplier
- Product code & name
- Manufacturer
- Donor #
- Expiry date
- Collection date
- Blood group
- Phenotype
- Attributes (details)
- Allogenic / Autologous / Directed
- Volume

- 13 Fields: 2 sources of info
 - Invoice
 - Actual product** (bar codes)

■ Plasma derivatives

- Order #
- Invoice #
- Date of receipt
- Supplier
- Product code & name
- Manufacturer
- Lot #
- Expiry date
- IU / vial (coagulation factors)
- Sub-vial lot #s (Tisseel)

- 8 Fields: 2 – 4 sources
 - Invoice → Product code
 - Actual product**
 - Manufacturers date sheet
 - Tisseel subvial lot # sheet

Bar codes → confirmation of administration from paper document – not the product itself

No bar codes → ↑↑ TIME

	Blood components	Plasma derivatives	Cost (22,500 vials/yr)
Entry time	13 sec / unit	60 sec / lot # (1 – 120 vials)	290 hrs / yr = \$7250 / yr

No bar codes → Errors

Product entry errors (reception / issuing etc.)		
Year	Blood components	Plasma derivatives
2005	11	34
2006	14	29
2007	11	21
Total	36	84

- April 2008 : TraceLine v9.4 (ISBT 128 compatible)
 - Bar codes for attributes :CMV-, Irradiated, Directed
 - Need to set defaults for product codes/attributes eliminated
 - Bar codes Héma-Québec phenotype (needs verification)

Errors at the Blood Centre (HQ)

2006	2007	2008 Jan-June
13	11	4

- Similar lot # → Wrong product delivered:
 - IVIg 10g lot# 26N5KV1 et IVIg 5g lot# 26N5KW1
 - BayGam 2mL # 26N3WT1 et BayHepB 5mL # 26N53W1
 - Gammagard # VNE1A004 et Iveegam # VNE1A004A

Errors at the MUHC

- 2007 = **21** reported errors (18 of 21 → database correction)
 - 11 wrong lot numbers
 - 5 wrong expiry dates
 - 2 wrong product codes
 - 1 wrong UI value for coagulation factor
- Jan-May 2008 = **7** errors
 - 4 wrong lot numbers
 - 3 wrong expiry dates

**Includes “reported events” only.
corrected immediately are not be reported.

Errors

Database corrections

- Once “moved”, lab cannot modify data
 - Database correction by supplier
 - Cost : minimum **\$260** (\$130 / hr x 2 hr (min))
 - Risk of error during correction
 - many vials affected at each status once moved
 - Time to verify following correction.
 - Temporary measures
 - Quarantine until corrected
 - Correct each issue voucher by hand to match vial → (?’s)

Database corrections

- 18 errors required database correction.
 - Potential: $18 \times \$260 = \4680 per year
 - Actual: $6 \times \$260 = \mathbf{\$1560}$ per year
- Estimate ~36-40 errors requiring 15min to several hours to investigate and make appropriate correction.
 - Estimate cost at \$25/hour > **\$1000** per year
- Cost of frustration = **???**

Total cost

- Δ Increased entry time = \$7250
- Supplier correction cost = \$1560
- Investigation & followup = \$1000

- Estimated cost \sim **\$10,000 / year**

Errors – impact on patient safety

- Expiry date **3-12**-2007 (entered **Dec 3**)
 - Nov 07: patient received expired Varizig **exp, Mar 12**

- Traceability:
 - Gammagard LE08G038A**B** vs LE08G038A**D**
 - distributed 2 x ***AB** instead of 1 x ***AB** + 1 x ***AD**
 - Detected by discrepancy in inventory following week
 - Split the vials in system & entered portions into each potential recipient's file as possibly transfused in case of recall.

- Dose:
 - IVIg **10g** lot# 26N5K**V**1 et IVIg **5g** lot# 26N5K**W**1

Longer ISBT codes

Shorten names
to ensure pertinent info
is legible in computer
system windows.

Plasma derivatives – to bar code:

- **Product code & name** → limit length
- **Manufacturer**
- **Lot numbers**
 - avoid O's & I's, & being too similar
 - Tisseel sub-vial lot # on exterior packaging
- **Expiry date** → standardize format
- **IU per vial**
- **Get ready to enable bedside scanning**
 - To scan the actual product instead of voucher

Everyone makes mistakes.
